VeriWay: Digital Identity for Mobile User Registration Compliance

Empowering telecom operators to achieve secure, compliant, and frictionless digital identity verification with a cloud-native, no-code OSS platform.

What challenges does VeriWay solve?

- **Instant regulatory compliance** for prepaid mobile user authentication.
- **Proven implementation in Mexico**, directly integrated with national ID registries.
- **Secure custody of regulatory evidence**, providing operators with only the minimum data required for compliance.

Key Benefits

Regulatory-Readiness
Immediate compliance with digital ID and KYC regulations for prepaid lines, ensuring business continuity and legal alignment.

Fast Integration
Standard API, immediate Proof of Concept (PoC), and frictionless onboarding process.

Seamless Customer Experience
Authentication via WhatsApp, Mobile App, Web Portal, or Chatbot, completed in seconds, without in-person verification.

Trusted & Proven Authentication
Integrates AI-based biometric verification validated in production environments, matching national ID databases.

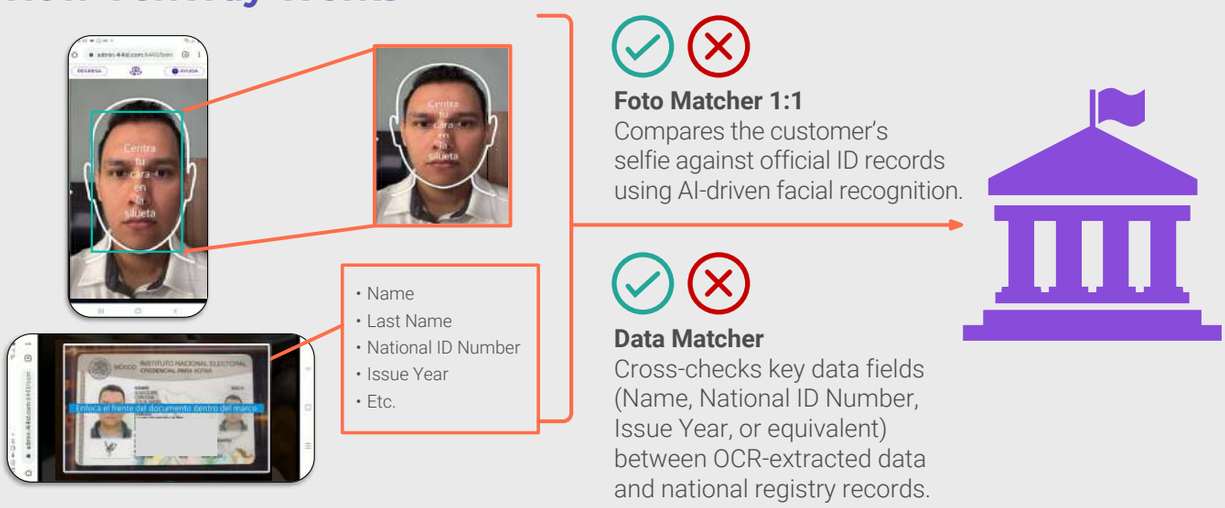
Traceability & Auditability
Complete authentication history available for regulatory audits and internal reviews.

Future-Proof Architecture
Cloud-native and no-code OSS foundation, scalable to support new digital identity and AI-powered OSS use cases as-a-service.

Operational Dashboard
Real-time web dashboard for biometric operations, system health, validation results, and executive summaries.

Security & Confidence
Official identity validation prevents fraud and impersonation while ensuring full compliance with data protection laws.

How VeriWay Works



VeriWay transforms compliance into a competitive advantage — delivering secure, cloud-native, and scalable identity verification for the telecom industry. Learn more at **www.intraway.com**
